# YouTube without ads

Create a Mullvad account and generate a Linux WireGuard configuration without IPv6 (UniFi does not support this yet). Make sure the configuration points to one of the Tirana exit-nodes.

Load this configuration into your UniFi site under VPN > VPN Client.

### New VPN Client ✕

#### Configuration

**i** VPN Client increases the system resource consumption. If you experience any performance issues, please disable the feature or upgrade to a more powerful [Cloud Gateway](#).

Type

WireGuard  OpenVPN

Name

WireGuard Client 2

Setup

File  Manual

[Upload Configuration File](#) **i**

Device Wizard **i**

Off  Device  Network

Content Wizard **i**

Off  Domain  IP  Region

#### Advanced

Maximum Transmission Unit **i**

Auto  Custom

Maximum Segment Size **i**

Auto  Custom  Off

[Create](#)

Now create a policy based route for the following domains to the Mullvad Tirana VPN.

## YouTube AL

Name

YouTube AL

Interface/VPN Tunnel 

mullvad-al-tia-wg-003

Kill Switch 

**Source** 

Any  Device / Network

**Destination** 

Any  IP  Domain  Region

Enter Domain Name

Add
